Introduction

Cabinet decree no. (211) of 13/1/1437A.H. gave the General Authority for Statistics (GASat) the authority to conduct surveys in the economic, social and population fields on behalf of the kingdom and publishing them periodically. Based on this authority, GASat has installed programs and surveys that aim to create a statistical database in all fields, including (knowledge surveys).

As part of field surveys conducted by GASat, the Household Sports Practice Survey 2017 is the first survey carried out by GASat about sports activity as part of knowledge statistics, in recognition of the importance of providing databases for this activity.

While preparing and conducting this survey, GASat was keen on adopting Saudi Vision 2030 as a basis in setting the methodology of the Sports Practice Survey. The vision has set a clear goal of increasing the level of sports practitioners at least once a week from 13% to 40%. GASat hopes that this survey, the first of its kind in the sports field, will be a first step for extensively conducting future surveys that include various objectives and consequently getting different outputs in their concepts and usefulness.

GASat is also glad to thank all partners and surveyed households, whose cooperation, after the guidance of Allah, had a great impact on issuing this bulletin. At the same time, GASat hopes that everyone will provide us with proposals via the e-mail info@stats.gov.sa, which will help improve the content of the bulletin and further develop future bulletins.

Allah is the Arbiter of Success,

General Authority for Statistics (GASat)
knowledge statistics

Methodology of Household Sports Practice Survey

Definition

It is a field survey to collect all data about household sports practice for a sample of selected households, in representation of all households and individuals in the Kingdom. Through this data, many estimates and indicators about household sports practice can be calculated.

Description:

The Household Sports Practice Survey is one of in-kind household field surveys, which is conducted as part of GStat's surveys plans. This survey has been designed, prepared and conducted for individuals who practice sports activity in the Kingdom of Saudi Arabia. The importance of this data lies in giving a picture about the scale of societal participation in sports and physical activity practice and the resulting studies and plans for development in general and for the sports field in particular.

Objectives:

The survey aims to give modern and new indicators about the scale of household sports practice, whether at home or outside, as well as understanding the reasons for not practicing sports by those who do not practice sports through the following:

- 1) Providing modern statistical data about the scale of sports practice by the household by (sex, nationality, educational status, age, marital status, in addition to some questions regarding the sports practice by the household).
- 2) Providing data about the numbers of regular sports practitioners, at least for once a week.
- 3) Providing data about the numbers of sports practitioners in public facilities or specialized (clubs/sports centers), which provide a proper place for practicing sports.
- 4) Providing data about how often the individual practices sport through the week.
- 5) Understanding reasons that prevent the individual from practicing sports.
- 6) Accurately identifying the percentage of sports practitioners in the Kingdom to put it in the hands of decision-makers to achieve Saudi Vision 2030.

Survey's Time Reference:

Data of the Household Sports Practice Survey regarding the information of housing and household and their characteristics are based on the date of visiting the household.

Survey Form:

The survey form was prepared and designed by specialists and experts in the field of sports activity. International standards and definitions were taken into account while designing the form. The form includes the following sections:

Section I: Basic Data of Household Members

This section is composed of a group of questions regarding sex, relationship with the head of the household, nationality and age.

Section II: Education and Marital Status

This section is composed of two questions; one about the educational level of the household members, and the second about the marital status.

Section III: Sports Practice

This section is composed of a group of questions regarding the sports practice, duration and place of practice and numbers of sports practice.

Survey Form Design

The Sports Practice Survey is one of in-kind household surveys carried out by the General Authority for Statistics by using the general population and housing census framework. To get highly efficient and effective estimates, the survey community has been divided into non-overlapping parts, characterized by relative homogeneity in their units. Each part is considered a category, and each category is dealt with as an independent community. All sampled units are put together to form the whole sample.

To prepare this framework, each administrative region was divided into a number of categories ranging 3-10 categories, defined according to population size, in each administrative region, making the total number 54 categories kingdom-wide.

The size of the survey's sample was estimated, and the selected sample, which is a random categorical cluster sample, was identified. It was selected through the following two stages:

In the first stage, (1,334) out of around (36,000) statistical areas within the census distributed across all regions of the Kingdom were taken.

In the second stage, the secondary sampling units were randomly drawn from the statistical areas, which were chosen in the first stage using the regular random sample. A total of (25) households were chosen from each statistical area, totaling (33,350) households all over the Kingdom.

Administrative Region	Number of Households	Administrative Region	Number of Households	Administrative Region	Number of Households
Riyadh	5175	Asir	2250	Najran	1600
Makkah	6050	Tabuk	1825	Al-Bahah	1500
Madinah	2300	Ha'il	1625	Al-Jawf	1650
Al-Qassim	1650	Northern	1750	Total	33350
Eastern Province	4200	Jazan	1775		

Survey Sample:

The total members of the households selected in the sample, including domestic helpers and the like who live in one house.

Data Collection Method:

Using the method of direct interview with the sampled household by selecting qualified and trained researchers to interview the household and register the data during the period of conducting the survey via a hand device (Tablet).

Most important concepts and definitions used in the survey:

Sports Activity:

"Sports Activity" is defined as any bodily movement produced by skeletal muscles that causes the acceleration of breathing and heartbeats as running, brisk walking, cycling, swimming and traditional sports as football, handball and basketball.....etc.

Individual practicing sports:

He is the person who practices a sport activity starting from age 15 years-old and above. As for the time spent in practicing sports activity, it depends on the practitioner himself and the goal he seeks to achieve by practicing sports. Given the necessity to define a period to measure the sports activity practiced by the individual, 30 minutes have been set as a minimum period in the day for most days of the week (at least five days).

Sports Clubs

They are the clubs that have a special and official organization, located in a province, locality or district and are officially recognized by the General Authority of Sports and by the federation they follow.

Sports centers:

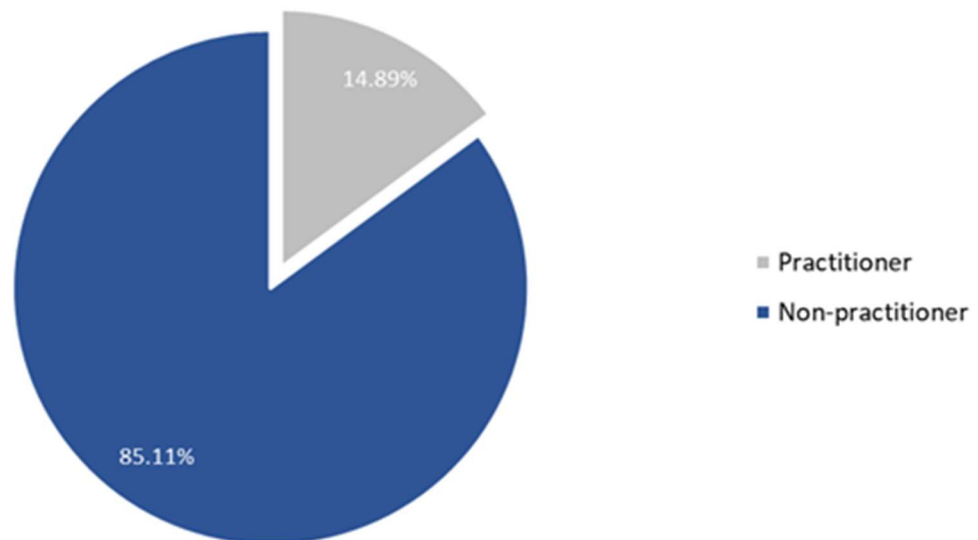

They are the places that include a number of multi-purpose closed halls in which members and clients can practice numerous kinds of sports activities. These activities can be available to individuals for daily fees or monthly or annual subscription (private sports centers). The sports club can be attached to a government body (free-of-charge or for nominal fees), or a closed sports hall where only one kind of sports is practiced.

Most important statistical indicators via the Household Sports Practice Survey

1- Percentage of sports practitioners, out of the total population in the Kingdom

Shape no. (1)

Status of sports practice (150 minutes and more per week) for individuals in the Kingdom

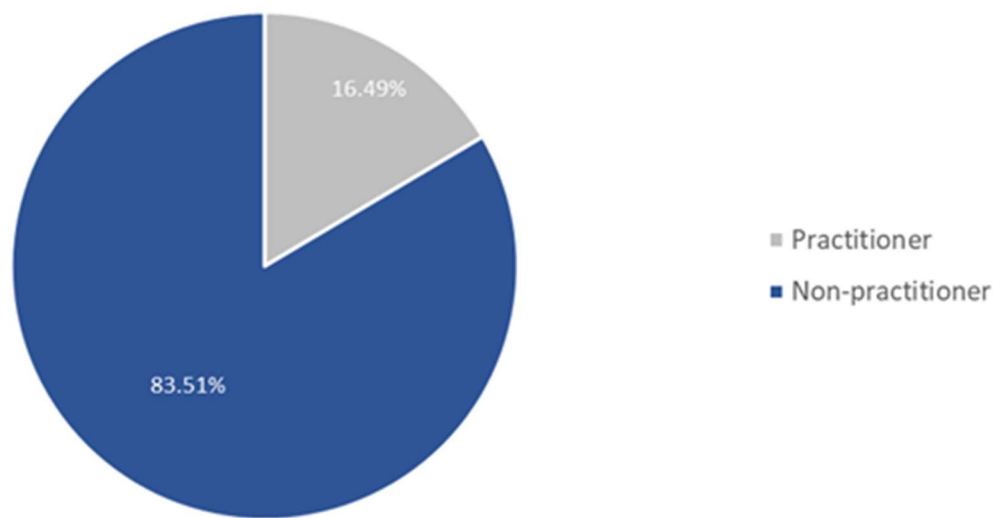

Shape no. (1) shows that the percentage of sports practitioners (150 minutes and more per week), who are aged 15-years-old and above is estimated by 14.89%, while the percentage of non-practitioners is estimated by 85.11% out of the total population in the Kingdom.

2- Percentage of Saudis (males and females) who practice sports activity in the Kingdom, out of the total Saudis

Shape no. (2)

Status of sports practice (150 minutes and more per week) for Saudis (males and females) in the Kingdom

2017

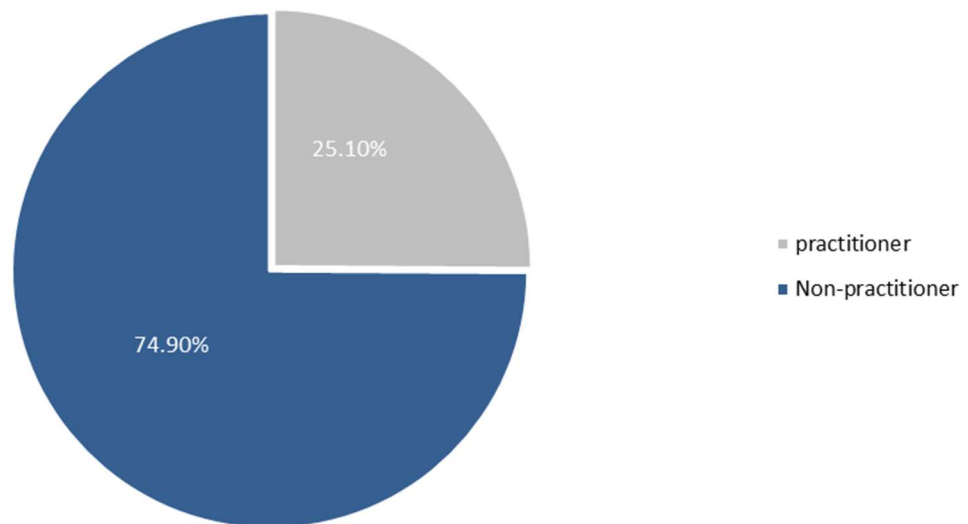

Shape no. (2) shows that the percentage of Saudis (males and females) who practice sports (150 minutes and more per week), and who are aged 15-years-old and above is estimated by 16.49%, while the percentage of Saudi non-practitioners is estimated by 83.51% out of the total Saudis (males and females).

3- Percentage of Saudi males who practice sports activity in the Kingdom, out of the total Saudi males

Shape no. (3)

Status of sports practice (150 minutes and more per week) for Saudi males

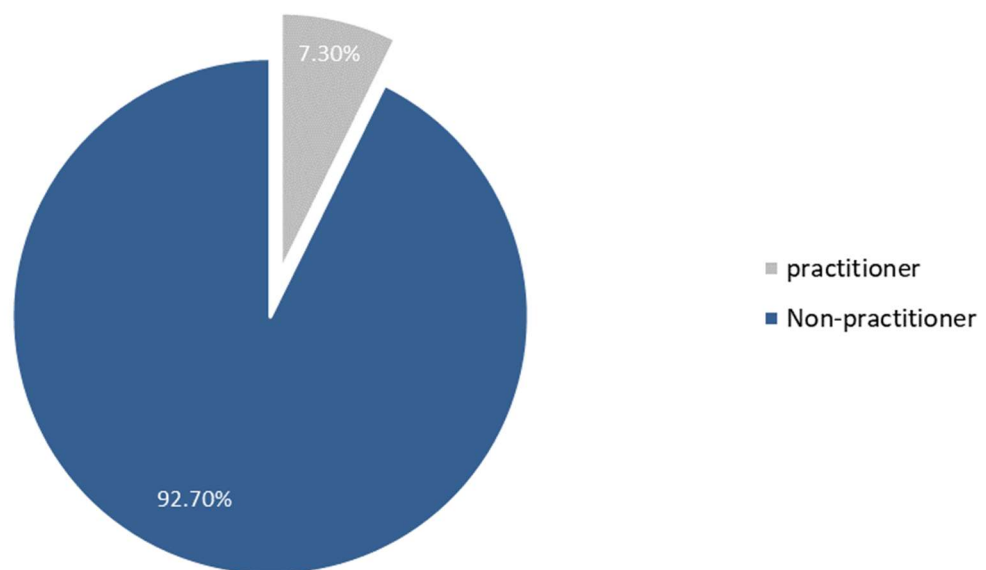

2017

Shape no. (3) shows that the percentage of Saudi males who practice sports (150 minutes and more per week), who are aged 15-years-old and above is estimated by 25.10%, while the percentage of Saudi non-practitioners is estimated by 74.90% of the total Saudi males.

4- Percentage of Saudi females who practice sports activity in the Kingdom, out of the total Saudi females

Shape no. (4)
Status of sports practice (150 minutes and more per week) for Saudi females

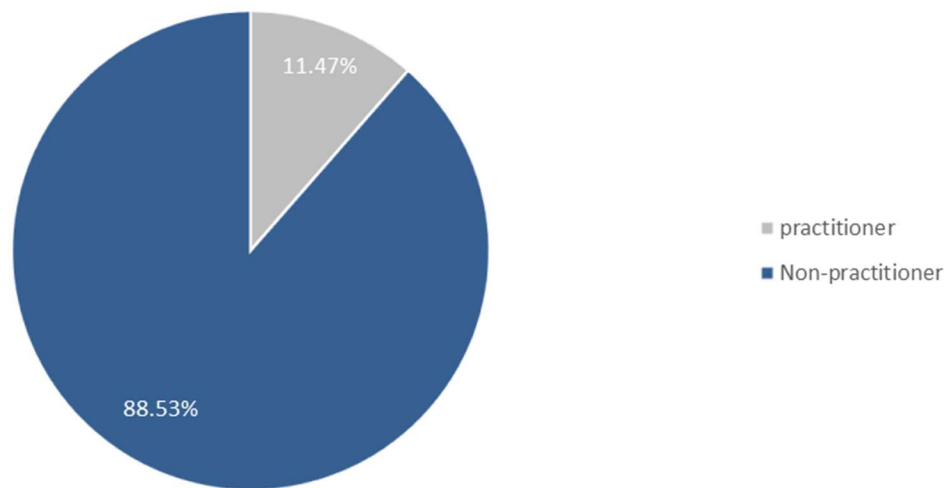

Shape no. (4) shows that the percentage of Saudi females who practice sports (150 minutes and more per week), who are aged 15-years-old and above is estimated by 7.30%, while the percentage of Saudi non-practitioners is estimated by 92.70% of the total Saudi females.

5- Percentage of non-Saudis (males and females) who practice sports activity in the Kingdom, out of the total non-Saudis

Shape no. (5)

Status of sports practice (150 minutes and more per week) for non-Saudis (males and females) in the Kingdom

2017

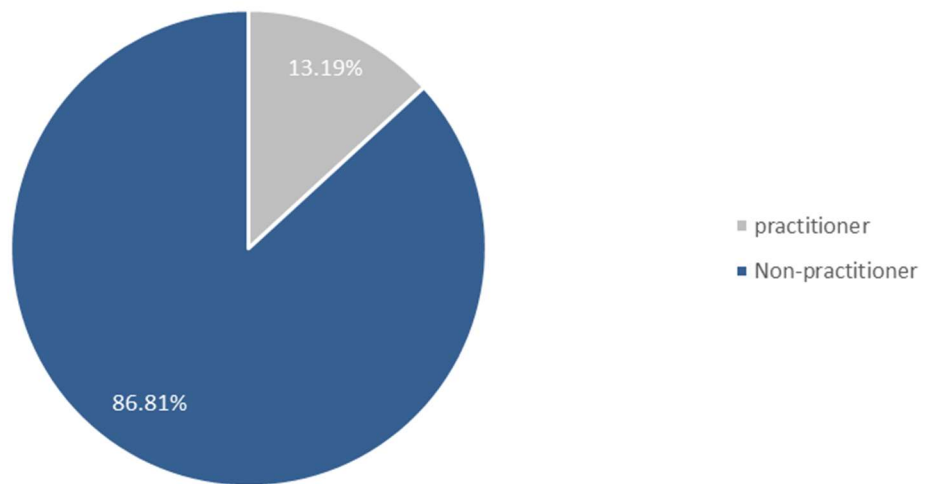

Shape no. (5) shows that the percentage of non-Saudis (males and females) who practice sports (150 minutes and more per week), who are aged 15-years-old and above is estimated by 11.47%, while the percentage of non-Saudi non-practitioners is estimated by 88.53% out of the total non-Saudis (males and females).

6- Percentage of non-Saudi males who practice sports activity in the Kingdom, out of the total non-Saudi males

Shape no. (6)

Status of sports practice (150 minutes and more per week) for non-Saudi males

2017

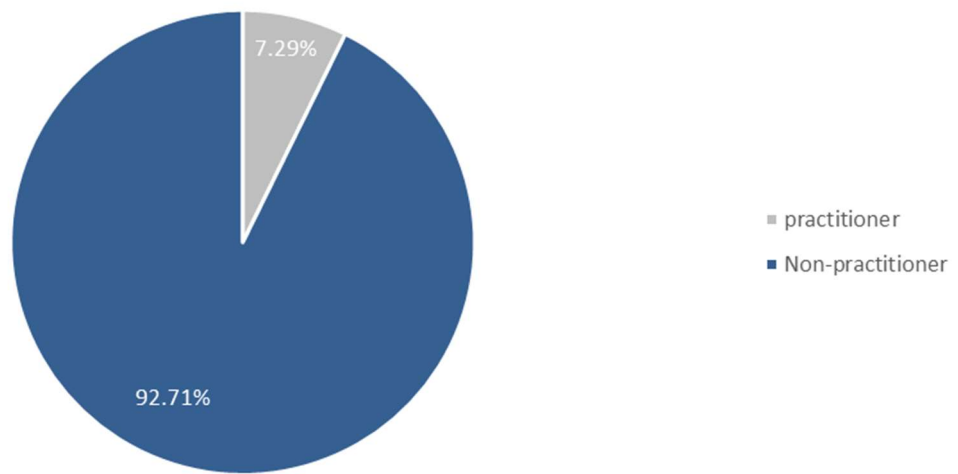

Shape no. (6) shows that the percentage of non-Saudi males who practice sports (150 minutes and more per week), who are aged 15-years-old and above is estimated by 13.19%, while the percentage of non-practitioners is estimated by 86.81% out of the total non-Saudi males.

7- Percentage of non-Saudi females who practice sports activity in the Kingdom, out of the total non-Saudi females

Shape no. (7)

Status of sports practice (150 minutes and more per week) for non-Saudi females

2017

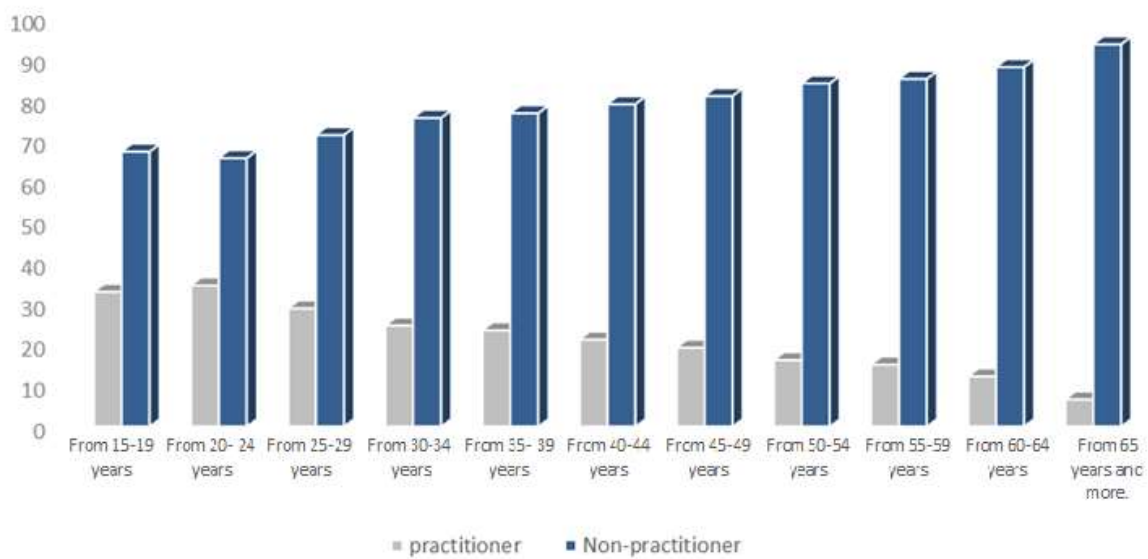

Shape no. (7) shows that the percentage of non-Saudi females who practice sports (150 minutes and more per week), who are aged 15-years-old and above is estimated by 7.29%, while the percentage of non-practitioners is estimated by 92.71% of the total non-Saudi females.

8- Percentage of Saudi males who practice sports activity in every age group kingdom-wide

Shape no. (8)

Status of sports practice (150 minutes and more per week) for every age group of Saudi males
Kingdom-wide

2017

Shape no. (8) shows that the percentage of Saudi males who practice sports activity (150 minutes and more per week) in every age group kingdom-wide as follows:

- In age group 15-19 years-old, the percentage reaches 32.85%, while the percentage of non-practitioners hits 67.15% of the total in this category.
- In age group 20-24 years-old, the percentage reaches 34.44%, while the percentage of non-practitioners hits 65.56% of the total in this category.
- In age group 25-29 years-old, the percentage reaches 28.81%, while the percentage of non-practitioners hits 71.19% of the total in this category.
- In age group 30-34 years-old, the percentage reaches 24.63%, while the percentage of non-practitioners hits 75.37% of the total in this category.
- In age group 35-39 years-old, the percentage reaches 23.47%, while the percentage of non-practitioners hits 76.53% of the total in this category.
- In age group 44-44 years-old, the percentage reaches 21.24%, while the percentage of non-practitioners hits 78.76% of the total in this category.

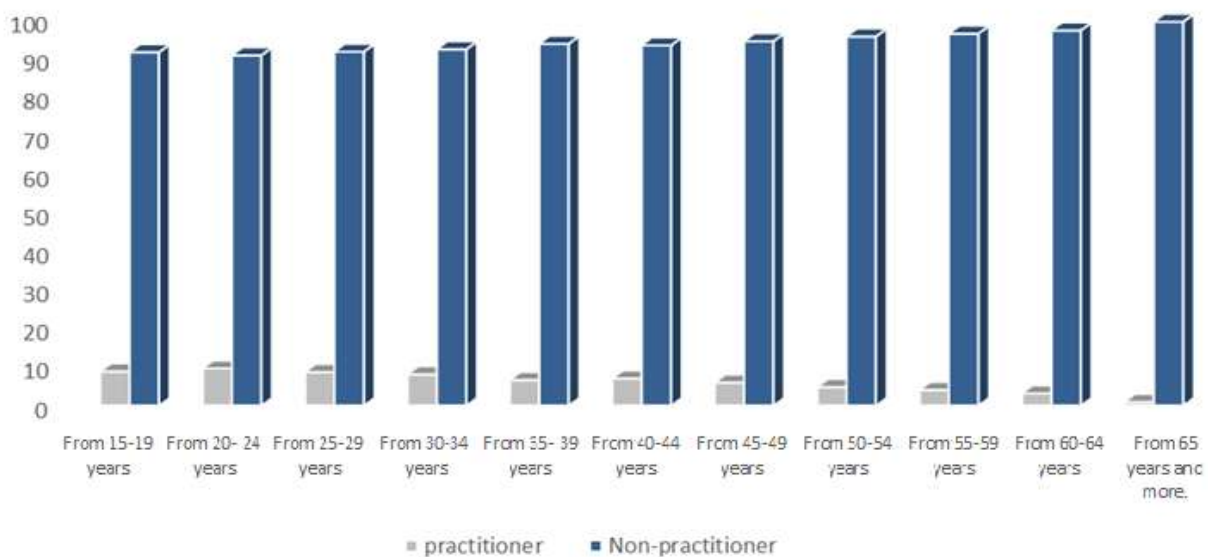

- In age group 45-49 years-old, the percentage reaches 19.26%, while the percentage of non-practitioners hits 80.74% of the total in this category.
- In age group 50-54 years-old, the percentage reaches 16.2%, while the percentage of non-practitioners hits 83.8% of the total in this category.
- In age group 55-59 years-old, the percentage reaches 15.09%, while the percentage of non-practitioners hits 84.91% of the total in this category.
- In age group 60-64 years-old, the percentage reaches 12.22%, while the percentage of non-practitioners hits 87.78% of the total in this category.
- In age group 65 years-old and above, the percentage reaches 6.61%, while the percentage of non-practitioners hits 93.39% of the total in this category.

9- Percentage of Saudi females who practice sports activity in every age group kingdom-wide

Shape no. (9)

Status of sports practice (150 minutes and more per week) for every age group of Saudi females Kingdom-wide

Shape no. (9) shows that the percentage of Saudi females who practice sports activity (150 minutes and more per week) in every age group kingdom-wide as follows:

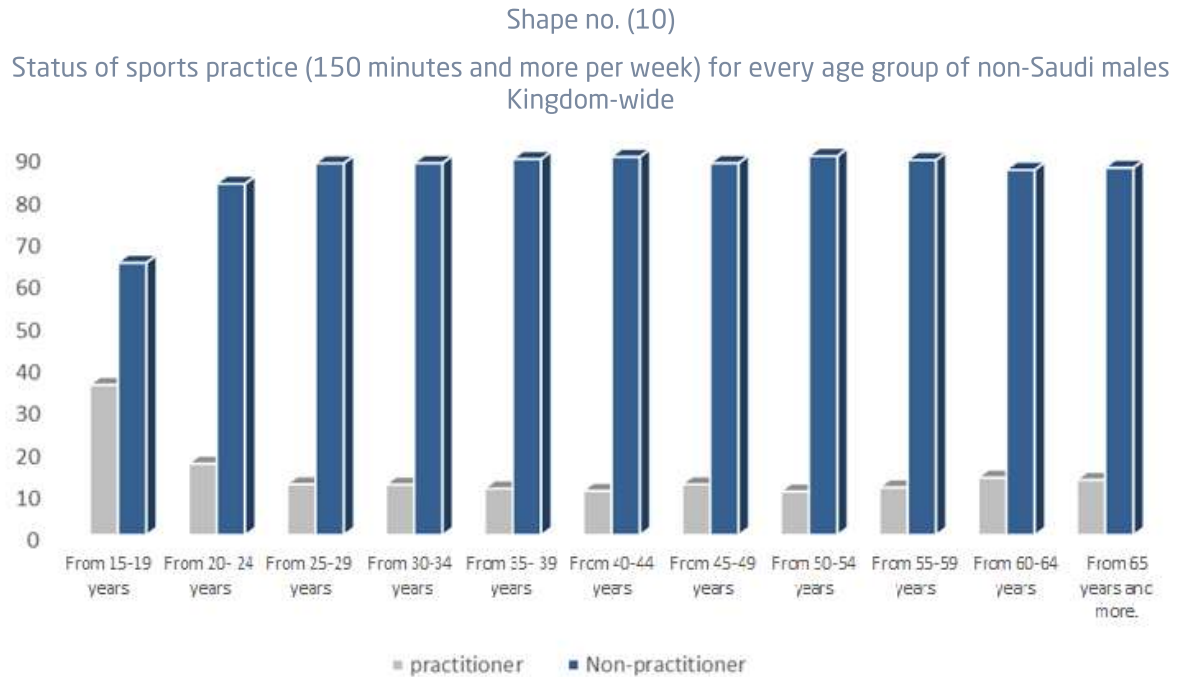

Household Sports Practice Survey 2017

- In age group 15-19 years-old, the percentage reaches 8.79%, while the percentage of non-practitioners hits 91.21% of the total in this category.
- In age group 20-24 years-old, the percentage reaches 9.57%, while the percentage of non-practitioners hits 90.43% of the total in this category.
- In age group 25-29 years-old, the percentage reaches 8.64%, while the percentage of non-practitioners hits 91.36% of the total in this category.
- In age group 30-34 years-old, the percentage reaches 8.02%, while the percentage of non-practitioners hits 91.98% of the total in this category.
- In age group 35-39 years-old, the percentage reaches 6.59%, while the percentage of non-practitioners hits 93.41% of the total in this category.
- In age group 40-44 years-old, the percentage reaches 6.99%, while the percentage of non-practitioners hits 93.01% of the total in this category.
- In age group 45-49 years-old, the percentage reaches 5.92%, while the percentage of non-practitioners hits 94.08% of the total in this category.
- In age group 50-54 years-old, the percentage reaches 4.73%, while the percentage of non-practitioners hits 95.27% of the total in this category.
- In age group 55-59 years-old, the percentage reaches 3.99%, while the percentage of non-practitioners hits 96.01% of the total in this category.
- In age group 60-64 years-old, the percentage reaches 3.14%, while the percentage of non-practitioners hits 96.86% of the total in this category.

- In age group 65 years-old and above, the percentage reaches 13.06%, while the percentage of non-practitioners hits 86.94% of the total in this category.

11-Percentage of non-Saudi females who practice sports activity in every age group kingdom-wide

Shape no. (11)

Status of sports practice (150 minutes and more per week) for every age group of non-Saudi females Kingdom-wide

2017

Shape no. (11) shows that the percentage of non-Saudi females who practice sports activity (150 minutes and more per week) in every age group kingdom-wide as follows:

- In age group 15-19 years-old, the percentage reaches 9.39%, while the percentage of non-practitioners hits 90.61% of the total in this category.
- In age group 20-24 years-old, the percentage reaches 8.28%, while the percentage of non-practitioners hits 91.72% of the total in this category.
- In age group 25-29 years-old, the percentage reaches 6.72%, while the percentage of non-practitioners hits 93.28% of the total in this category.
- In age group 30-34 years-old, the percentage reaches 7.89%, while the percentage of non-practitioners hits 92.11% of the total in this category.
- In age group 35-39 years-old, the percentage reaches 7.66%, while the percentage of non-practitioners hits 92.34% of the total in this category.

Household Sports Practice Survey 2017

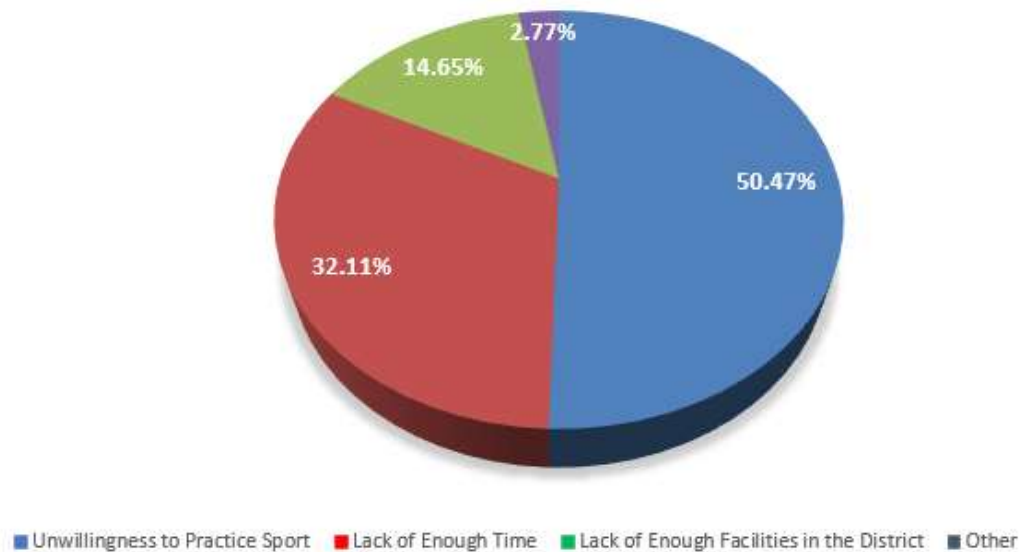

- In age group 44-44 years-old, the percentage reaches 6.44%, while the percentage of non-practitioners hits 93.56% of the total in this category.
- In age group 45-49 years-old, the percentage reaches 6.06%, while the percentage of non-practitioners hits 93.94% of the total in this category.
- In age group 50-54 years-old, the percentage reaches 6.9%, while the percentage of non-practitioners hits 93.1% of the total in this category.
- In age group 55-59 years-old, the percentage reaches 6.49%, while the percentage of non-practitioners hits 93.51% of the total in this category.
- In age group 60-64 years-old, the percentage reaches 1.77%, while the percentage of non-practitioners hits 98.23% of the total in this category.
- In age group 65 years-old and above, the percentage reaches 0%, while the percentage of non-practitioners hits 100% of the total in this category.

12- Reasons for not practicing sports activity for individuals who do not practice sports activity kingdom-wide

Shape no. (12)

Reasons for not practicing sports activity for individuals who do not practice sports activity kingdom-wide

2017

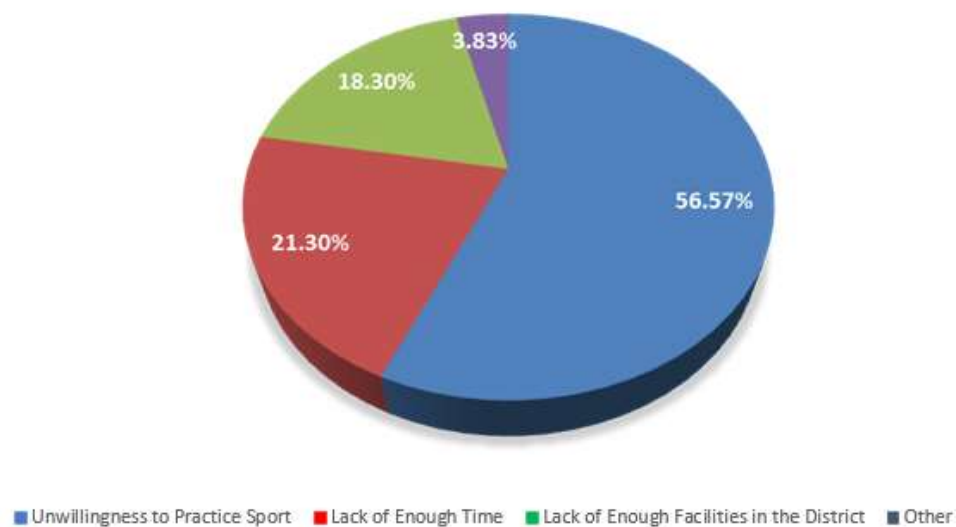

Shape no. (12) shows that lack of desire to practice sports is the most common reason among individuals who do not practice sports activity in the Kingdom. Their percentage reaches 50.47% of the total population in the Kingdom, while individuals who do not practice sports activity due to insufficient time account for 32.11% of the total population. The individuals who do not practice sports activity because of lack of appropriate facilities in the district make up 14.65%, while the percentage of individuals who do not practice sports activity because of other reasons reaches 2.77% of the total population.

13- Reasons for not practicing sports activity for Saudis who do not practice sports activity kingdom-wide

Shape no. (13)

Reasons for not practicing sports activity for Saudis who do not practice sports activity kingdom-wide

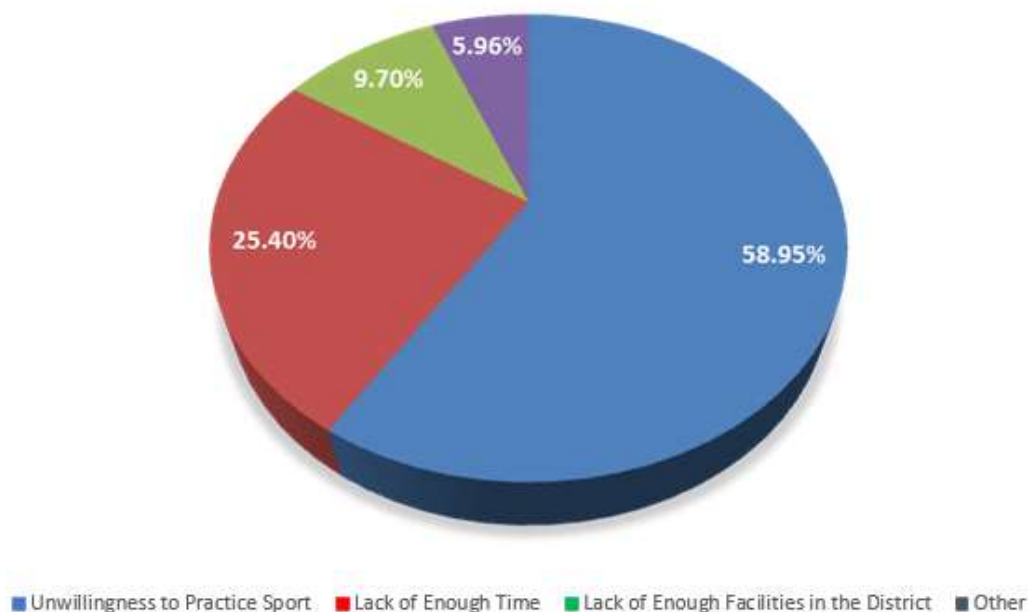

2017

Shape no. (13) shows that lack of desire to practice sports is the most common reason among Saudi males who do not practice sports activity in the Kingdom. Their percentage reaches 56.57% of the total Saudis, while individuals who do not practice sports activity due to insufficient time account for 21.3% of the total Saudi males. The individuals who do not practice sports activity because of lack of appropriate facilities in the district make up 18.30%, while the percentage of individuals who do not practice sports activity because of other reasons reaches 3.83%.

14- Reasons for not practicing sports activity for Saudi males who do not practice sports activity kingdom-wide

Shape no. (14)

Reasons for not practicing sports activity for Saudi males who do not practice sports activity kingdom-wide

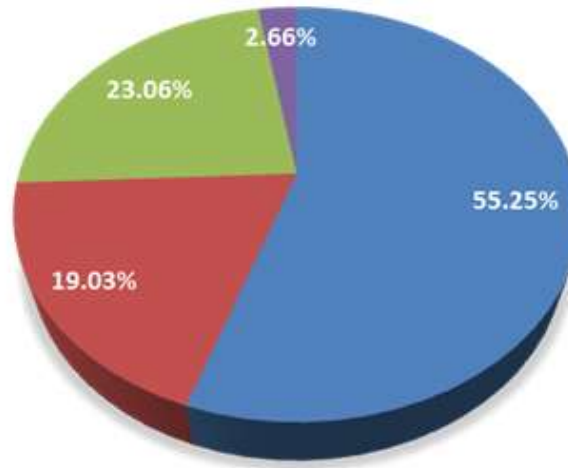

Shape no. (14) shows that lack of desire to practice sports is the most common reason among Saudi males who do not practice sports activity in the Kingdom. Their percentage reaches 58.95% of the total Saudi males, while individuals who do not practice sports activity due to insufficient time account for 25.40% of the total Saudi males. The individuals who do not practice sports activity because of lack of appropriate facilities in the district make up 9.70%, while the percentage of individuals who do not practice sports activity because of other reasons reaches 5.96%.

15- Reasons for not practicing sports activity for Saudi females who do not practice sports activity kingdom-wide

Shape no. (15)

Reasons for not practicing sports activity for Saudi females who do not practice sports activity kingdom-wide

■ Unwillingness to Practice Sport ■ Lack of Enough Time ■ Lack of Enough Facilities in the District ■ Other

Shape no. (15) shows that lack of desire to practice sports is the most common reason among Saudi females who do not practice sports activity in the Kingdom. Their percentage reaches 55.25% of the total Saudi females, while individuals who do not practice sports activity due to insufficient time account for 19.03% of the total Saudi females. The individuals who do not practice sports activity because of lack of appropriate facilities in the district make up 23.06%, while the percentage of females who do not practice sports activity because of other reasons reaches 2.66%.

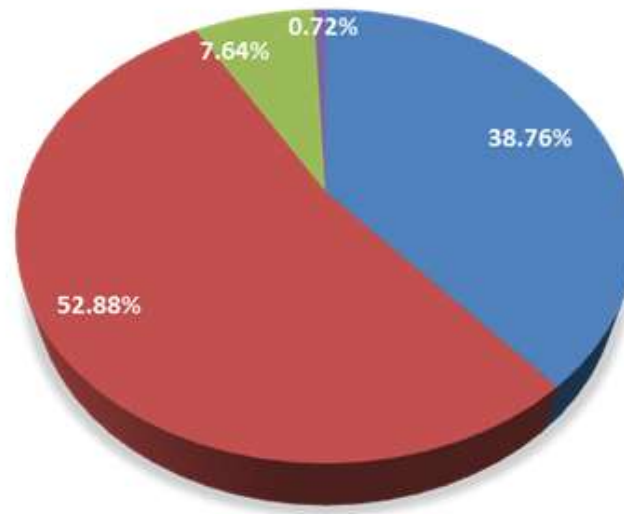

2017

16- Reasons for not practicing sports activity for non-Saudis who do not practice sports activity kingdom-wide

Shape no. (16)

Reasons for not practicing sports activity for non-Saudis who do not practice sports activity kingdom-wide

■ Unwillingness to Practice Sport ■ Lack of Enough Time ■ Lack of Enough Facilities in the District ■ Other

Shape no. (16) shows that insufficient time is the most common reason among non-Saudis who do not practice sports activity in the Kingdom. Their percentage reaches 52.88% of the total non-Saudis, while individuals who do not practice sports activity because of lack of desire account for 38.76% of the total non-Saudis. The individuals who do not practice sports activity because of lack of appropriate facilities in the district make up 7.64%, while the percentage of non-Saudis who do not practice sports activity because of other reasons reaches 0.72%.

2017
