| 2015                          | 129.4 | 129.4  |       |       |       |       |       |       |        |        |        |        | 129.4                   |

32

Among the most prominent measures taken are the following:

- Continuous monitoring of the performance of researchers through field visits by the program's managers and supervisors.
- Conducting field comparisons for the prices of commodities, which are randomly and automatically selected.
- Studying reports received from the field and to respond to queries directly.
- Quality control of data entry software and transmission.
- Developing a number of automated editing rules during the process of data entry, review, processing and publishing to identify errors and notes before the completion of debugging and correction process.
- Quality control of programs of the index number calculation, in addition to conducting periodic tests and comparisons.
- Treatment of the disappearance of commodities and the change of outlets.

The **Laspeyres** formula to calculate the index number is in accordance with the following formula:

$$\text{Index number} = \frac{\sum_{a=1}^N \frac{P_{i,a}}{P_{0,a}} \cdot \frac{P_{0,a} Q_{0,a}}{\sum_{a=1}^N P_{0,a} Q_{0,a}}}{\sum_{a=1}^N P_{0,a} Q_{0,a}}$$

Where:

$P_{i,a}$ : geometric mean of the commodity price  $a$  during the month  $i$

$P_{0,a}$ : geometric mean of the commodity price  $a$  during the base year  $o$

$Q_{0,a}$ : the item quantities  $a$  during the base year  $o$  (the item weight)

## 9. Dissemination Dates

Cost of living index number is published on a monthly basis in consistent with the recommendations of the dissemination standards, and thus the beneficiaries of the data of the cost of living index number will get them in a timely manner. Programs and release calendars of dissemination have been reviewed in order to enhance the final outputs and put them in a way achieving the beneficiaries' desire, where the dissemination process is carried out via printed bulletins and CDs, as well as via the Internet through the official Web site of the CDSI.

## 10. Data Quality

To ensure the highest possible level of accuracy and quality of the field data, an integrated and automated editing program for data quality to control the possible errors, as well as through the adoption of a set of procedures determined by the "Price & Index Numbers Statistics Department" at all stages of implementation of the field programs. And that has also been taken into account in the preparation of studies and sample design for POS and rental units, as well as when preparing the procedures of theoretical and practical training for all field working groups and selecting a group of qualified researchers in all cities where the program being implemented.

## 7. Relative significance of Goods & Services (Relative Weights)

The relative significance of goods and services has been determined, based on the results of the Household Expenditure & Income Survey 2007 which covered all regions of the Kingdom. The relative importance of the commodity as the percentage of the share on commodity or service out of the total expenditure of all goods and services within the consumer basket.

The following table shows the relative weights of the main divisions within the consumer basket :

**The relative weights of main divisions**

| Main expenditure division   | Weights |
|---|---------|
| General Index   | 100.0   |
| 1- Food and beverages   | 21.7    |
| 2- Tobacco  | 0.5     |
| 3- Clothing and Footwear  | 8.4     |
| 4- Housing, water, Electricity, Gas and other fuel                  | 20.5    |
| 5- Furnishings, household equipment & Routine household maintenance | 9.1     |
| 6- Health   | 2.6     |
| 7- Transport  | 10.4    |
| 8- Communication  | 8.1     |
| 9- Recreation and Culture   | 3.5     |
| 10- Education   | 2.7     |
| 11- Restaurants and hotels  | 5.7     |
| 12- Miscellaneous goods and services                                | 6.8     |

## 8. Calculating of price index number:

After the completion of all stages of the preparation of data, collection, editing and processing, the cost of living index number at the general level and detailed levels is calculated. The method of Laspeyres has been adopted in calculating the index number by using the geometric mean of prices, which using the following formula:

$$\left[ \prod_j P_{i,j} \right]^{\frac{1}{x}} = \sqrt[x]{\prod_j P_{i,j}}$$

Where:

**P<sub>i, j</sub>**: prices X the period X the source j

**x**: the number of outlets

- 
- Give priority to the larger volume of employment in the point of sale to ensure sustainability.
  - Drawing an alternative sample, to be used in case of unavailability of the original outlet of sale.

### **3. Price Data Collection**

Price data is collected, through direct personal interviews by a team of trained enumerators, from selected outlet and rental sale units. Address of each source is marked to facilitate access by enumerators, taking into account the distribution of these outlets for each city to cover all goods and services.

### **4. Data Entry**

Data entry process carried out after collecting from interviewers. Entry programs have been prepared and the necessary controls prior to data entry process have also been taken. All that are implemented via many ways as follows:

- Direct entry of the collected data, using computers available at the CDSI head office, branches and offices in accordance with a special program.
- Transmission of data using handheld devices.

### **5. Data editing and processing**

A wide range of rules for automatic editing and processing of the data is applied according to special analysis codes to be determined by the enumerator and field supervisor for each process.

Data revision is done through a number of phases starting from the stage of data collection through primary and automated review of input data and review of central analytical data to the review of data and publishing tables.

### **6. The Base Year**

The base year of the cost of living index numbers for the entire population has been approved and shifted from 1999 to be 2007 where the household expenditure & income survey was conducted.

## **Chapter two : Methodology & Data Quality**

### **1. Selection of the Goods Basket**

Depending on the final results of household expenditure and income survey 2007, the items was selected to consist the new basket of goods and services to build the cost of living index number.

Taking in mind the presentation of goods and services included the consumer basket which mean an increasing in the sample size to be commensurate with the volume of goods and services, which showed a relative importance equal to the statistical limit 0.03% or greater, taking into consideration that other items of the relative importance that have not achieved the value of the statistical limit has not been neglected, and that was addressed by choosing the method of distribution to similar items. The total number of selected items reached 476 goods and services. Also, the number of items for the types of rental units rent covered by the survey has been increased to cover the four types of units (villa, floor in a villa, apartment, and public house). Goods and services forming the consumer basket are distributed into several main sections, sub-groups, chapters and items. The tabulation was carried out by using the international tabulation of the classification of individual consumption by purpose (COICOP).

### **2. Selection of sample of outlets and rental units**

- Outlets and rental units, from which the prices of various goods and services collected, had been distributed, taking in mind the geographic coverage of the Kingdom's administrative regions. Results of the establishment's census have also been used in selecting outlets, in addition to the framework of population and housing census in the selection of leased units, which have been increased to four types (villa, a floor in a villa, apartment, and public house).
- Distribution of outlets in Districts ( Ahya) by proportion of number of shops available in the framework at the city level.
- Focus on specialized shops selling goods or services.
- Taking into account the type of market where the shop is located, and the relative distribution of the selected points of sale.
- The importance of the shop type within the city so that the following should be observed:
  - Table of shopping ratios obtained from the results of the household expenditure and income survey 2007 at the city level, and took it into account when selecting a sample of items or commodities.
  - Linking the shopping ratios to type of shop .
- Relative distribution of outlet by business activity of each shop: retail sale, services and other.

- The comprehensive representation of goods and services forming the consumer basket, by increasing the sample to commensurate with the volume of goods and services, which showed a relative importance equal to the statistical limit 0.03% or greater, so the number of selected items in the basket new reached (476) item compared to (406) item in the previous basket. The number of items for the types of rental units covered by the survey has been increased to four types of units (villa, floor in a villa, apartment, public house).
- Distribution of pricing per item to four weeks to ensure temporal coverage of the movement of the price fluctuations throughout the month.
- The use of more accurate mathematical methods in equations and processing for the calculation of the index number, and the use of the geometric mean of prices as an alternative to the arithmetic mean, and this is consistent with the new international recommendations on the calculation of price index number.
- Rely most on the automatic editing and checking of data to ensure accuracy, timesaving and manual data processing.
- The use of a set of mathematical equations for processing of quality and quantity as well as for the disappearance of product, seasonal and prices disappearance, etc., according to the latest international recommendations and statistical theories used in this area.
- Developing the software.
- Using handheld devices to collect data and reduce reliance on paper forms.
- This search is characterized by getting latitude and longitude coordinates of all points of sale and rental units by the (GPS) devices to be used for quick access to the point of sale in addition to the purposes of follow-up, checking and data quality.
- Preparation of a modified series of the cost of living index numbers in the light of the base year changes.

## Chapter One

### Introduction

The Central Department of Statistics and Information (CDSI) collecting data on consumer prices in order to build its index numbers to identify the extent of the cost of living change. Given the extreme importance of this data, an integrated system has been developed to cover all aspects in terms of the selection of goods and services, methods of prices collection and their verification as well as the index numbers calculation, in addition to the selection of outlets and their geographical distribution.

The consumer basket is a real group of goods and services that are monitored through the household expenditure and income survey. The percentage distribution is extracted for consumption of goods and services within the consumer basket to be the mainstay in the calculation of index numbers.

### 1. Objectives of the cost of living index numbers program

Prices surveys aim, in general, to provide data on consumer prices for goods and services included in the consumer basket and provide data on index numbers of the cost of living within a time series data.

**Usually, the cost of living index numbers are used as follows:**

- A statistical method to measure changes in the prices of goods and services purchased by the consumer from time to time.
- It is widely used for measuring inflation rates and economic recession .
- It is used in economic and statistical analysis of price movements and its future forecasts through different periods of time.
- An indicator of the changes in the purchasing power of the currency.
- Also, it is used in the areas of national accounts for deriving constant price estimates.

### 2. Developing the cost of living index numbers

The methodology has been developed in line with international recommendations and the aim of improving the quality of data and its representation of the movement of price changes, where a set of practical measures introduced to the new program to strengthen the trend of CDSI, in general, to improve the quality of statistical outputs. . . Matters taken into account are the following:
