

## Inflation in Saudi Arabia reaches 1.8% in July 2026 compared to July 2025.

The Consumer Price Index (CPI) in Saudi Arabia recorded an annual increase of 1.8% in July 2026, compared to the same month of the previous year (July 2025). This increase was mainly driven by a rise in housing, water, electricity, gas, and other fuel prices by 4.2%, food and beverage prices by 1.5%, and transport prices by 1.4% (Figure 1).

Figure 1: Annual change in CPI (%)

### Annual change in consumer prices by division

The prices of the housing, water, electricity, gas, and other fuels division increased by 4.2%, driven by a 4.3% increase in the prices of the actual rentals for the housing group. This was followed by the personal care, social protection, and other goods and services division, which increased by 2.9%, driven by an 11.1% increase in the prices of other personal effects, which was affected by the increase in the prices of jewelry and watches by 12.0%, followed by the entertainment, sports, and culture division by 2.4%, driven by the increase in the prices of the holiday offers group by 3.7%

On the other hand, the prices of furniture, home appliances, and periodic home maintenance division decreased by 0.5%, while the clothing and footwear division decreased by 0.4% (Figure 2).

### Methodology and quality

The Consumer Price Index (CPI) reflects changes in the prices paid by consumers for a fixed basket of goods and services consisting of 582 items. The items included in this basket were selected based on the results of the 2023 Household Income and Expenditure Survey, and their weights were determined accordingly, in addition to other supplementary data sources on household final consumption expenditure.

The General Authority for Statistics (GASTAT) has adopted a new methodology for calculating the Consumer Price Index, aimed at improving data quality in line with international best practices. This has been achieved through expanded geographic coverage, increased coverage of points of sale and basket items, and the adoption of new data sources for the regular collection of price information.

Data based on the updated methodology have been published starting from August 2025. [Methodology and Quality](#), [Table](#)
