

Completion rate for primary education level (14-16 years) reaches 99.16%

The basic education stages represent the beginning of skill formation and the building of cognitive abilities for the population. They continue throughout the years of compulsory education, contributing to laying the initial foundations for the effective development of human capital and achieving the sustainable development goals sought by the Kingdom in accordance with the targets of Saudi Vision 2030. The results of the education and training survey showed that the completion rate for the primary education level was 99.16% for population (14-16 years).

Distribution of completion rate in primary education

The completion rate in primary education was 99.16% for population (14-16 years), where the percentage of females and males recorded 99.27% and 99.05%, respectively.
